

Experience

Bamboo Technologies	<i>Software Engineer (Remote part-time)</i>	Melbourne, Australia May 2026 - Present
- Worked on an AI-assisted OutSystems to Power Platform migration PoC, using structured metadata and prompts to support Dataverse table and model-driven app generation. - Analysed legacy application structures, including data models, fields, relationships, and business logic, to help convert migration requirements into AI-readable formats.		
	<i>Associate Software Engineer</i>	Guangzhou, China June 2025 – Feb 2026
- Ranked 1st in a PL-900/PL-200 aligned bootcamp capstone by building a Power Platform banking app with role-based access and maker-checker workflows. - Built enterprise AI knowledge solutions using retrieval-based workflows, SharePoint, and prompt tuning to support grounded document-based responses. - Contributed to invoice-processing and document understanding workflows, extracting structured data from varied document formats with post-processing logic. - Developed Dataverse-based proof-of-concept applications that generated summaries, structured outputs, and automated form population from business data.		
DeepSesh deepsesh.com.au	<i>Co-founder, also as Software Engineer</i>	Melbourne, Australia Mar 2026 – Present
Conducted early product planning for a student engagement platform, mapping user needs, market gaps, core features, scaling considerations, and development responsibilities across the team.		
ABC Academy of Music (Canada)	<i>Software Engineer Intern</i>	Melbourne, Australia Jul 2024 – Nov 2024
- Contributed to a 5-person client project building a neighbourhood doctor appointment app with booking and doctor-patient chat features. - Built Spring Boot and MySQL backend services on AWS EC2 and configured Jenkins CI/CD pipelines to streamline deployment for the team.		
Guangdong Jianke Innovation Technology Research Institute Co., Ltd.	<i>Software Engineer Intern</i>	Guangzhou, China Jul 2023 – May 2024
- Contributed to multiple government-funded SaaS and IoT projects, including laboratory instrument management, smart mining, and smart city bridge monitoring systems. - Developed Vue.js frontend components and Spring Boot backend services for IoT management platforms, supporting real-time device data collection through MQTT and flexible MongoDB storage for varied device fields. - Resolved 120+ bugs across security, performance, and usability areas, while improving selected database query performance by around 10% through SQL optimisation and paginated data retrieval. - Reported task progress through an Agile project management platform and collaborated with colleagues through pair programming to debug complex backend query issues.		

Education

The University of Melbourne	Parkville Expected Dec 2027
Major: Master of Software Engineering (Coursework)	
RMIT University	City Campus Dec 2024
Major: Bachelor of Software Engineering	

Skills

Language	Java, Python, JavaScript, TypeScript, C++, SQL, Dart
Frameworks	Spring Boot, JPA/Hibernate, MyBatis, Flask, Django, Express.js, React, Next.js, Vue.js, Flutter
Cloud / Data	Azure AI Foundry, Azure Blob Storage, AWS DynamoDB, Copilot Studio, Cosmos DB, Dataverse, Google AI Studio, MySQL, MongoDB, PostgreSQL, SharePoint, SQLite, Supabase, Vercel
System / Tools	Jenkins, Claude Code, GitHub Copilot, Antigravity, Grok Build
Areas	Full Stack Development, RAG systems, NLP, AI Document Processing, API design, CI/CD, Scrum

Certificate & Achievement

IBM: Full Stack Software Developer Professional Certificate | Generative AI: Elevate your Software Development Career
Microsoft: AI-900 | PL-900 | Copilot Studio - Recruit & Operative | Applied Skills: Build a generative AI chat app | Agent Commander from Microsoft Copilot AI Agents Summit | Tech Intensity Award (Team) from Enterprises Competition
University of Melbourne: Melbourne Plus: Innovation from student startup competition
